

Total Beverage Solution:

- Process Driven RAS
- Fully Featured WMS
- Load Planning Module (TPM)
- Robust Reporting tools
- RM and Labor Planning
- Agile Demand Planner
- On-site or In the Cloud

Beverage Tool Benefits:

- Load trucks efficiently
- Access dashboards anywhere
- Utilize extensive data store
- Plan for demand changes
- Measure your performance
- Optimize routes

“Softeon has provided a software solution that improves every aspect of our warehousing and distribution operations.”

TOOLS

Optimize planning

Enhance reporting

Improve resource management

Softeon’s Beverage Tools extend your WMS or RAS to enable operations, optimize planning and enhance reporting. You add only the modules you need to connect the pieces of the supply chain where you need it.

Load Planning

Transportation Planning Module (TPM)

Load Planning is a key module as order processing and routes to market are changing and becoming more efficient. With the increased use of a mixed presell route hybrid delivery model, one warehouse may load out bulk, small format end load, bay trucks, peddle and on premise routes. Softeon’s Beverage Load Planning tools allow you to:

- Handle more complex order flows and load types
- Automate bulk and end loading truck build.
- Merge inbound orders based on rules configuration
- Configure side loaders with a bi-level decision tree, by bay for pick efficiency, including layer pick
- Build driver friendly pallets

Reporting and Analytics

Reporting and Analytics provides your team with real-time workforce performance information and KPIs. Softeon’s Beverage Reporting and Analytics tools allow you to:

- Rapidly construct reports and save as templates for your KPIs
- Explore data using analytic tools to gain insights and uncover opportunities for improvement
- Reduce the time and cost involved with constantly customizing reports to get information

Deployment Options:

Softeon offers a choice in software deployment. Softeon's RAS solutions can be deployed as a stand-alone system with the option to add other integrated, beverage modules when the timing is right for you.

Plus, Softeon's Beverage solutions are available as a licensed installation or as a **cloud-based hosted solution**.

Softeon's service-oriented architecture and powerful rules engine create flexible solutions that work hard. Customers achieve rapid implementation, low cost of ownership and an efficient supply chain.

Sample Customers:

Labor Planning and Management

Managing your number one resource has never been more important. You need to reduce costs and minimize execution variability. Softeon's Resource Management System (RMS) module provides powerful tools that enable you control and optimize performance. Softeon's RMS allows you to:

- Plan for labor resources based on actual work
- Access labor reporting at multiple levels
- Utilize an incentive-based pay model

Accurate Forecasting

Accurate forecasting drives inventory, replenishment and purchasing decisions. Softeon's **Agile Demand Planner** allows you to:

- React to near-term customer demand information, including POS data as well as store and distributor inventory levels
- Conduct planning from bottom-up (actual sales) or top-down (revenue targets)

Truck Routing and Planning

Truck routing and planning automatically creates delivery truck plans integrated with customer pre-orders and route-specific sales forecasts (peddle sales). Softeon's truck planning module allows you to:

- Gain significant loading and shipping efficiencies
- Build shipments and routes based on the powerful rules engine for shipment optimization that supports all carriers and modes
- Drive labor efficiencies in loading operations and delivery route stops for pre-sales and peddle-sales scenarios
